

Tutorial: iFrame Configuration

User Guide

Version: 1.0

January 2026

A step-by-step guide

Implementation

To implement our service to your website you only need to add an iframe with the following link:

Configuration

1. Display settings

Here you will find all the settings that are available for display.

Much is already predetermined, but it is important that all pixel settings are given as numbers and all color settings as hex codes with 6 or 8 digits.

2. Special days

Here you will find all dates that are expected to occur, such as Christmas.

No events have been entered yet. To add one, click the "Add special day" button.

Then you can give the appointments a name, indicate whether you are closed all day, and if not, when you open and close, the date, and a short informative description for the customers.

The screenshot shows the 'Spezialtag hinzufügen' (Add Special Day) form. The left sidebar is identical to the previous screenshot. The main form includes fields for 'Name' (with a radio button for 'Ganztägig geschlossen'), 'Öffnungszeiten' (Open hours), 'Datum' (Date), and 'Beschreibung' (Description). Red arrows point from the text labels to each of these fields. At the bottom, there are 'Abbrechen' (Cancel) and 'Speichern' (Save) buttons, along with a language selection dropdown set to 'DE'.

To edit dates you can click on the date you want to edit and you will get forwarded to the same edit window as before.

3. Weekly Schedule

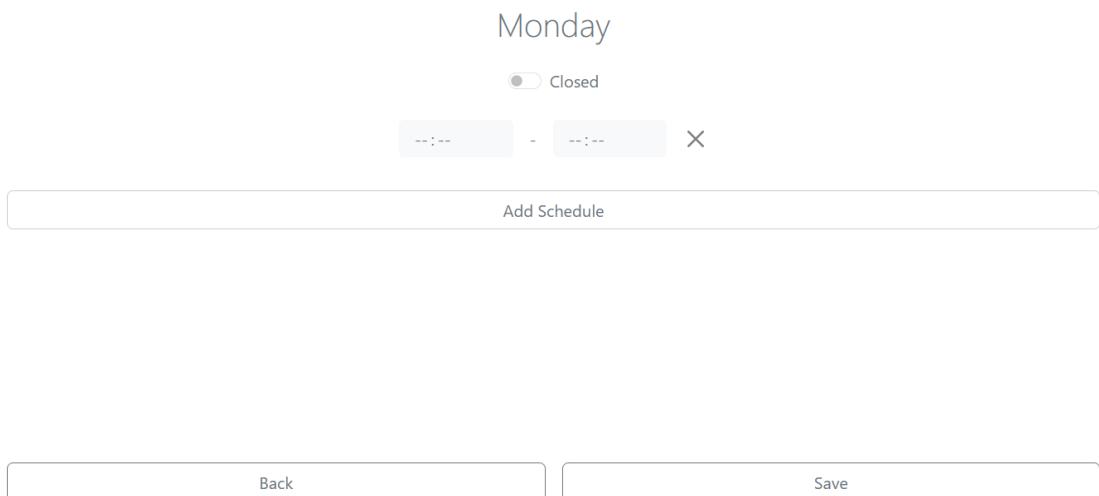

Here you will find your weekly schedule of your business. There is nothing yet, let's change that.

Click on the column of the day you want to add a schedule. For example Monday.

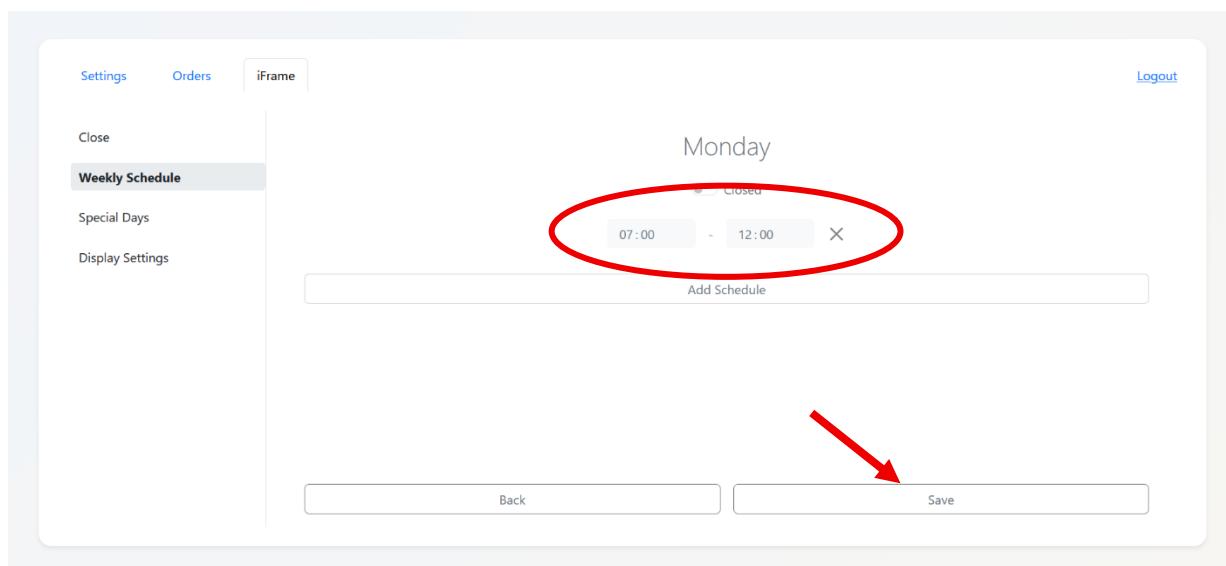

The screenshot shows a weekly schedule grid. The columns are labeled from left to right: Mon, Tue, Wed, Thu, Fri, Sat, Sun. The 'Mon' column is circled in red. A red arrow points from the bottom of the 'Mon' column towards the 'Add Schedule' button at the bottom of the page. The y-axis on the left lists times from 01:00 to 07:00. The top navigation bar includes 'Settings', 'Orders', 'iFrame', and 'Logout'. On the left sidebar, there are links for 'Close', 'Weekly Schedule' (which is highlighted), 'Special Days', and 'Display Settings'.

There you will be forwarded to the following window where you can check if its closed, if not you can add schedules.

This screenshot shows a detailed view for Monday. It features a 'Closed' toggle switch which is currently set to 'closed' (indicated by a red arrow). Below the toggle is an 'Add Schedule' input field, also indicated by a red arrow. At the bottom of the screen are 'Back' and 'Save' buttons. The top navigation bar and sidebar are identical to the previous screenshot.

Then you can put in the hours you are open. For example, 7:00 till 12:00.

Then you can hit save and your schedule will be available to your users.

Mon	Tue	Wed	Thu	Fri	Sat	Sun
07:00 07:00 - 12:00						
08:00						
09:00						
10:00						
11:00						
12:00						
13:00						
14:00						

4. Close

Here you can close in case of an unexpected event or an emergency.

If you don't already have an emergent closure, you can remove it by unchecking the "closed" switch.

If you must close you can check the "closed" switch, add a time till when you will be closed, for example till midnight, and if you want to you can add a description for your customers.

The screenshot shows a user interface for managing business closures. At the top, there are three tabs: 'Settings' (blue), 'Orders' (blue), and 'iFrame' (gray). On the right side, there is a 'Logout' link. Below the tabs, there is a sidebar with four items: 'Close' (selected, highlighted in gray), 'Weekly Schedule', 'Special Days', and 'Display Settings'. The main content area has a title 'Unscheduled Closure'. A toggle switch is set to 'Closed'. To the right of the switch, it says 'Until: 00:00'. Below the switch, there is a dropdown menu labeled 'Description:' with 'DE' selected. A text input field contains the word 'Hurricane'. At the bottom of the main content area is a 'Save' button.
